

People-Centric Integration

New Approach Using People-Centric Integration

- Integration of health and human services is important to people and their needs
- Create people-focused use cases to illustrate the need for and benefit of information and service integration
- Provide ability to react and adapt to changing environments with dynamic adjustments using agent-based technology

Countering the Ever-Growing Business Model of Profiting from Continuous Integration

- Software is brittle at the interfaces
- Interoperability standards do not reflect the changing vendor capabilities and their exposure with new interfaces
- Each new software version makes money for the vendors by adding new integration contracts and requires in-house staff to address changes
- LifePulse360 provides smart agents built to handle the version management and brittle interfaces

Analysis and Design for People-Centric Agent-Based Shared Services

- Understand the health transformation context from laws, technology options and people’s demands for change
- Gather and expand people-centric integration use case scenarios
- Use integration design patterns (e.g. vertical, concurrent, and big-gather)
- Create cross-organization service mapping by defining integration points and special integration shared services

LifePulse360 Can Integration Where Health Information Exchanges Exist or Can Build Interfaces

- Some states have Health Information Exchanges (HIEs) but others do not
- LifePulse360 can work with the variety of HIE capabilities
- LifePulse360 will partner with leading HIE vendors to build the necessary interfaces
- LifePulse360 includes special integration services that can use DIRECT-connect capabilities.
