

LifePulse360 Overview

What Is It?

- Platform to coordinate and integrate the delivery of health and human services to local communities
- Platform to provide phased incremental implementation tailored to patient-consumer needs
- Process to reduce the confusion and complexity of the healthcare system for patients and providers

Who Will Benefit? Providers

- Community health centers
- Behavioral health / substance abuse centers
- Veterans Administration: Choice/Community
- Medicaid: addiction treatment coordination
- Disease Foundations: chronic care management
- Prison recovery programs

Who Will Benefit? Patient-Consumers

- Returning vets/homeless vets
- Addicts and recovering addicts
- Aging populations
- Patients with complex care needs

What is the Technology?

- Innovative use of agents and cloud technology
- Applications in a patent pending software package and care coordination framework
- Use of open Application Application Interfaces (APIs) and Core Data Standards
- Family of software agents

How Does it Work? The Solution

- Concern-driven portal agents, collaborative environment with community-care coordinators
- Population-type horizontal integration that meet personalized needs
- Community-based resource management

Recipe for Success

- Staff with experienced people who love to solve challenging problems with a mix of new and ready technologies
- Teaming with academic researchers
- Personal and population scorecards
- Measures of care coordination efficiency and effectiveness
- Building special privacy and consent agents that go beyond HIPAA

About BDC-HealthIT

- New perspective with future focus
